Test: 3-Page Static Website (Main / Images / Agent)

Story

You were hired to build a small marketing website for a new product. The designer sent **3 screenshots**:

1. **Main page**
2. **Images page**
3. **Agent page (bonus)**

You must recreate the UI **as close as possible** using **semantic HTML** and clean CSS.

Images can be different from the ones in the screenshots.

Using flexbox/flex or grid will result in a 0 score!

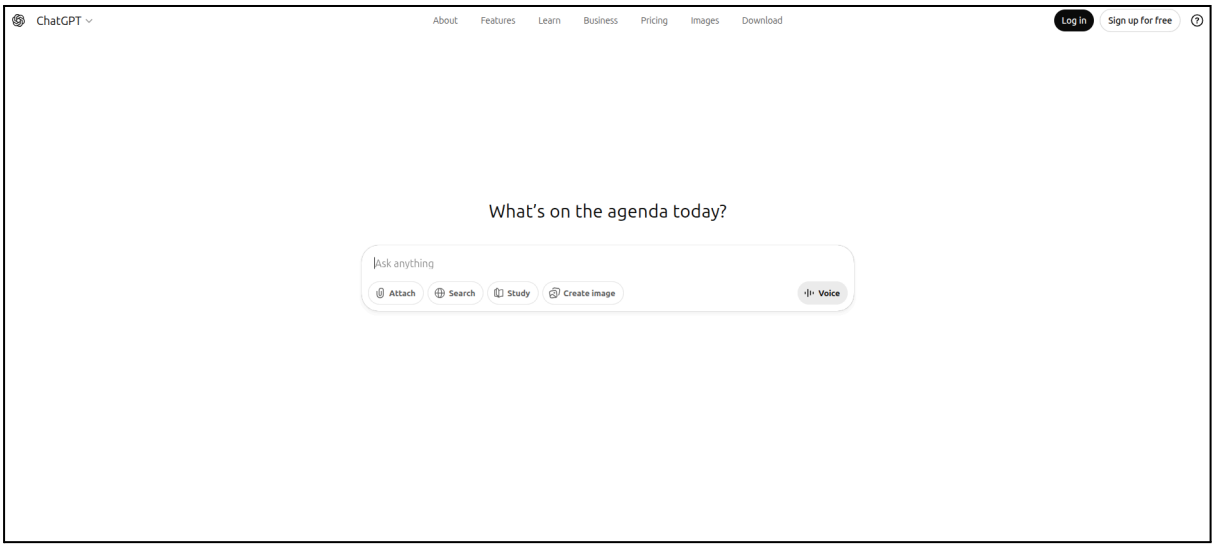

What you must submit

Files (exact)

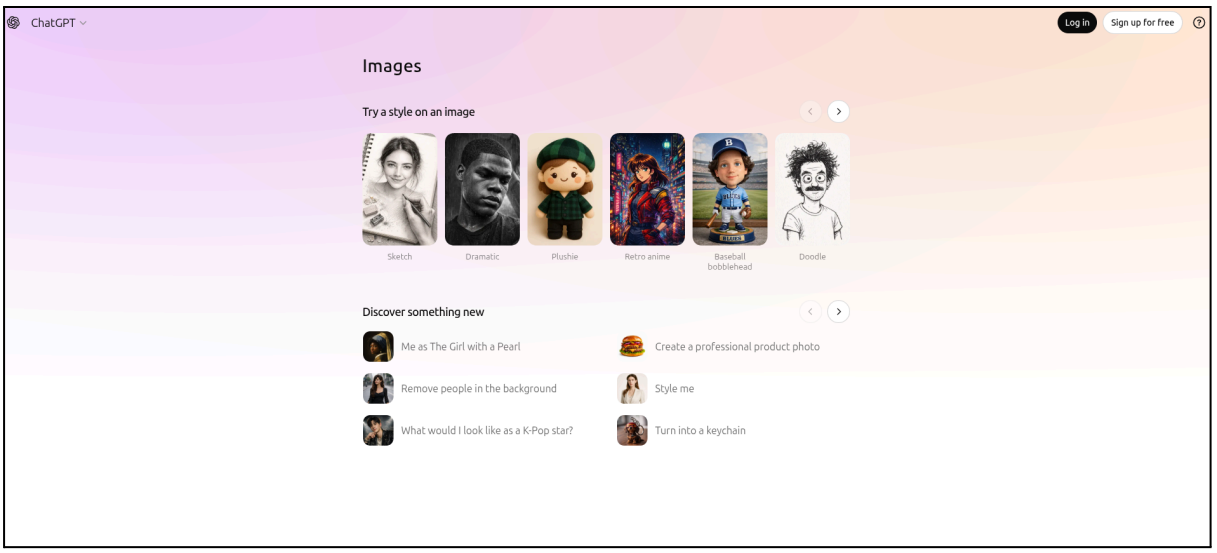

- `index.html` (Main)
- `images.html` (Images)
- `agent.html` (Agent) (bonus)
- `css page for each html page`

Images:

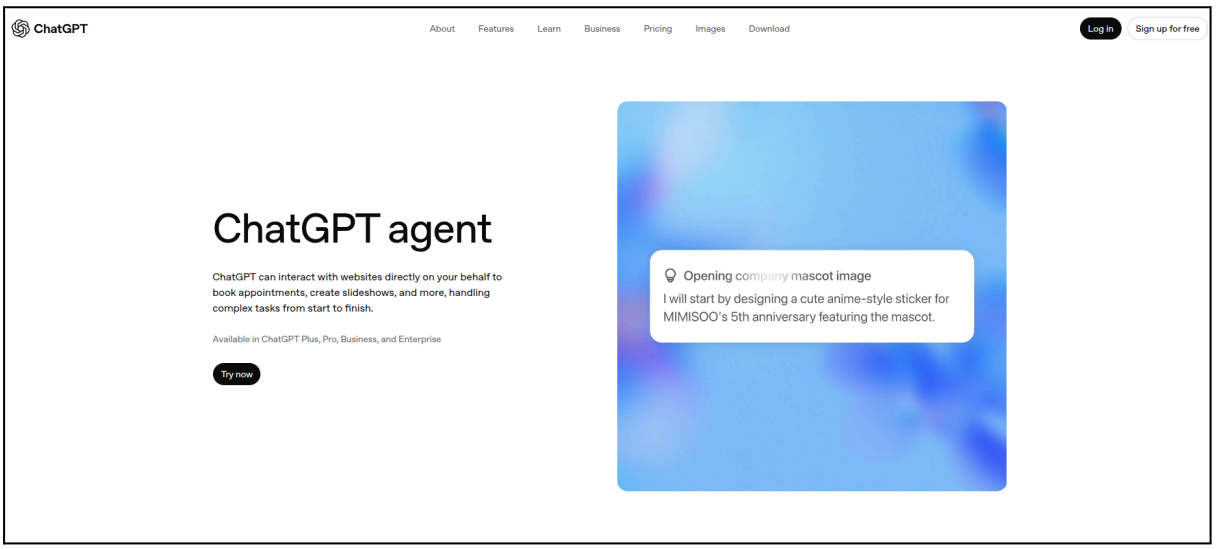

main page:

images page:

agent page: (bonus)

Running

Open `index.html` in the browser. Navigation must allow moving between all pages.

Time: planned to start at about 09:15 (after roll call and a walkthrough of the test), 3 hours, until about 12:15. Main and Images pages are required, the Agent page is a bonus.

Global rules (strict)

- **Semantic HTML**
- No using HTML tags for styling!

Layout must match the screenshots

- Create **all** visible elements from the images.

- Place elements in the **correct location** relative to each other (alignment, spacing, groups).

- Colors must be **close enough**. (css gradient can help you)

- Fonts must be assigned with “font-family” **OR loaded from a font site** (e.g., Google Fonts - https://fonts.google.com) and look **close** to the screenshot.

- “As close as possible” means visual closeness: all texts and elements are in the correct place, colors are almost identical, and sizes and proportions are similar.
- Target screen: a standard laptop (viewport between 1366×768 and 1536×864). A fixed layout is fine. No responsive design or mobile support is required.
- Color palette (approximate, sampled from the screenshots). Text and dark buttons: #0D0D0D. Dark gray text (menu, button labels): #5D5D5D. Secondary text: #6E6E6E. Placeholder and captions: #8F8F8F. Light borders: #EAEAEA. Light button background: #ECECEC. Page background: #FFFFFF.
- Images page background gradient: purple at the top left #EFD1FA, orange at the top right #FFE7D7, fading to white at the bottom (#FFFFFF).
- Agent page blue area: light blue #87C9F8, mid blue #5AA7F7, deep blue #6B94FC (blurred gradient). The text box inside it is white (#FFFFFF), title #535353, body #4C4C4C.
- Using css flexbox or grid is prohibited!

Shared top menu (mandatory on the main page and the agent page; not on the images page)

- A top navigation/menu exists on the main page and the agent page and links to:
    - Main (index)
    - Images
    - Agent
- Images page: a center menu is NOT required (as in the screenshot). The site icon at the top left must link back to the Main page.
- The menu layout should match the screenshots (see page requirements below).

Page requirements

1) Main page (`index.html`)

Top navigation bar

Must contain:

- **Centered navigation text** (as appears in the screenshot)

- **Left side**: icon + site name
- **Right side: a dark “Log in” button, an outlined “Sign up for free” button, and a round help icon button (3 actions on the right)**

Main content (center area)

Must contain:

- A **main title/headline**
- A **form** with:
  - A **text input**
  - A **placeholder** inside the input (must be visible)
- Inside the input box, below the placeholder: the buttons Attach, Search, Study and Create image aligned to the left, and a Voice button aligned to the right of the box

---

2) Images page (`images.html`)

Must contain:

- **Top left:** site icon

- **Top right: “Log in”, “Sign up for free” and a round help icon button**
- **Center area:** title + image gallery
    - Each image has **text below it** (caption/label)
- **Bottom area:**
    - A **small title**
    - A row/grid of **small cards**
- Background includes **light purple or light orange or both**
    - You may implement as a **gradient hint** (allowed)

---

3) Agent page (`agent.html`) (bonus)

Top navigation

- Same nav bar properties as the **Main page**

Page body

Must contain:

- **Text block on the left**, vertically centered in the main area
- A **blue-background image/illustration area** (doesn't need to be identical)
- Inside the blue area: a **rounded-corners text box**
- Include a **lightbulb icon** inside that box (SVG / font icon / image are all OK)

Allowed technologies

- HTML + CSS only
- No flexbox/flex or grid - using it will result in a total 0 score.
- External fonts (required)
- External icon library is allowed (Font Awesome / Material Icons) OR SVG icons OR local image icons

Area	Points
Project structure + navigation	10
Semantic HTML (global)	20
Main page layout + components	35
Images page layout + components	35
Bonus: Agent page layout + components	20
